

How to Add Client System to Symantec Admin-Kit

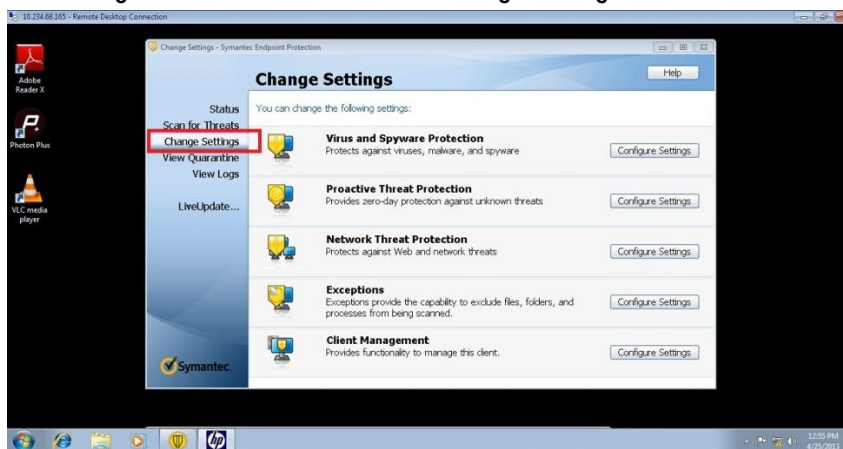

1. First Open Client System and open Symantec Client .

2. When it is not connected with Server its shows Live Update enable

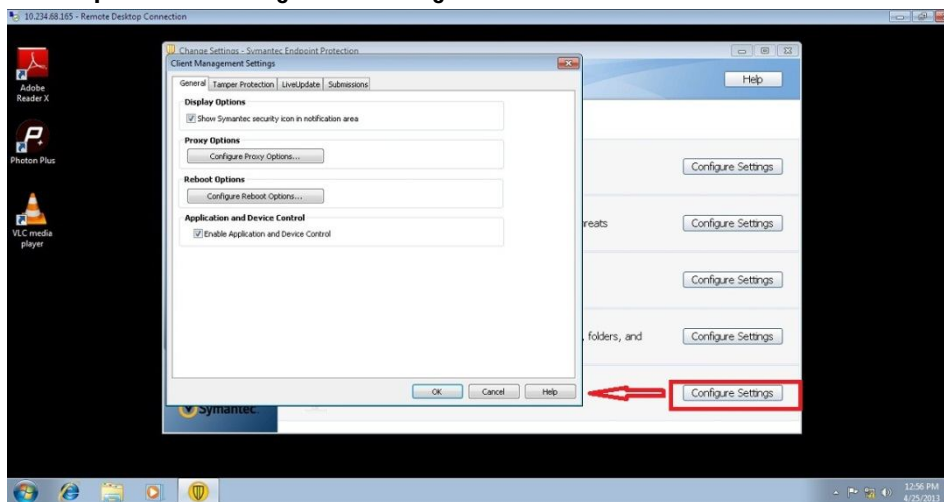

3. For Adding Client to the Server click on Change Settings

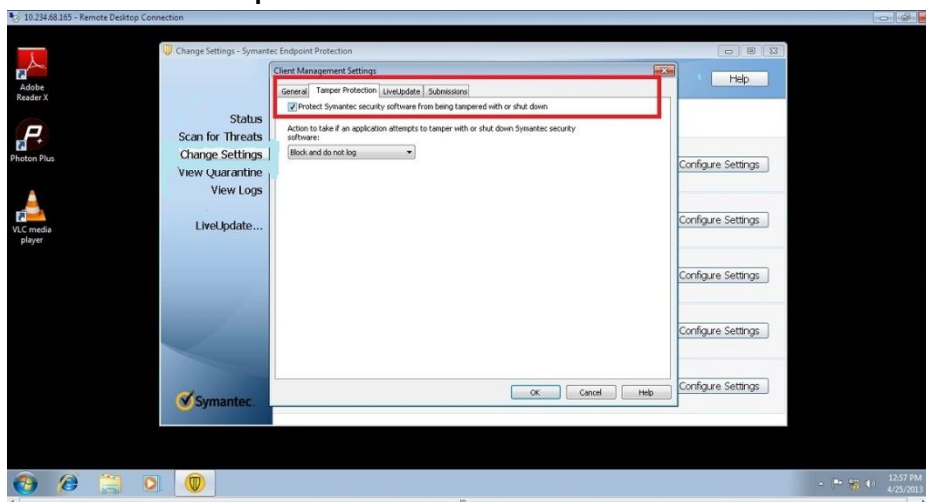

4. After Clicking on Change Setting click on Client Management configure settings

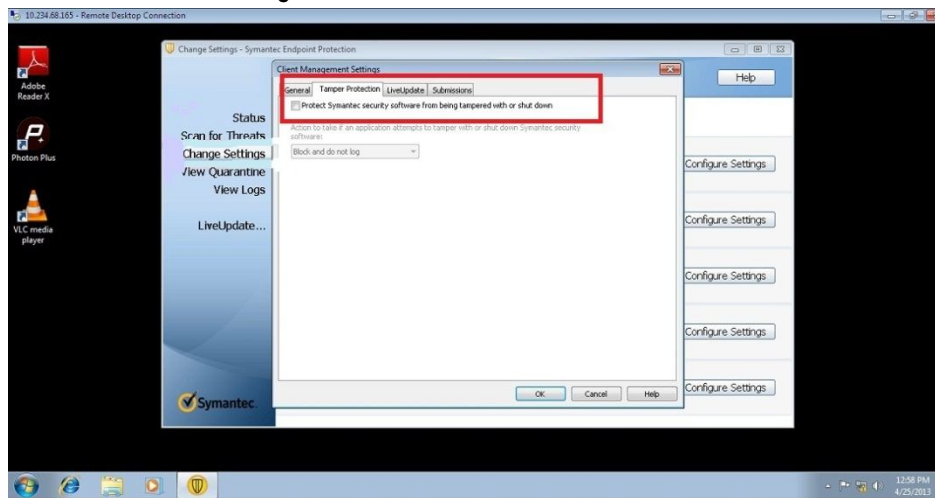

5. It Will open Client Management Settings

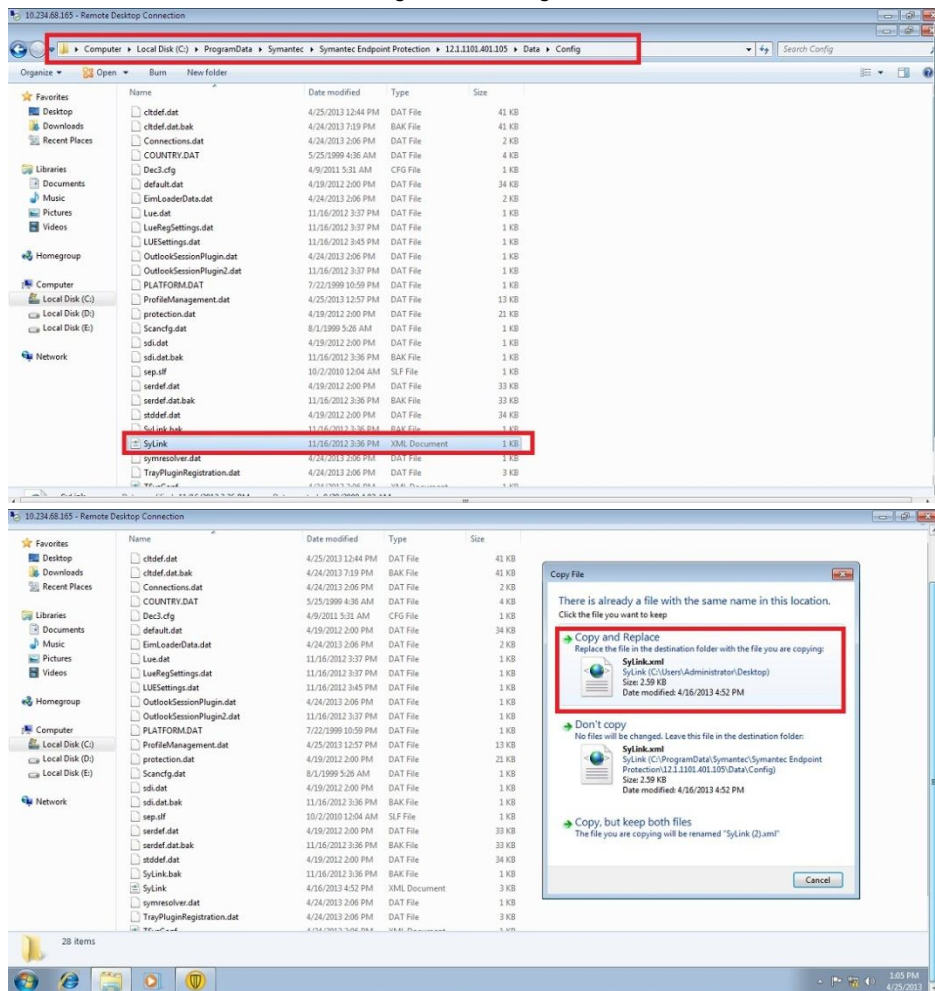

6. Go to Second Tab Tamper Protection

7. Remove the Tick showing below

8. Now Copy and replace SyLink .xml to C:\ProgramData\Symantec\symantec endpoint Protection\12.1.1101...\Data\config . As showing below

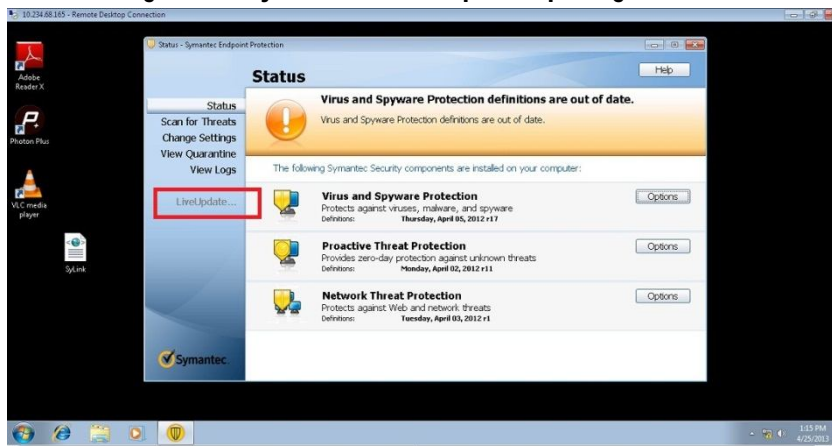

9. Now Restart the Client System.

10. After Restart you will find three option on Symantec taskbar icon when right click on it

11. Check the login screen you will find live update option got disabled.

12. If Point no. 10 and 11 are showing the mention status its means now you are connected with Symantec Admin-Kit. It will take 3-4 hour for taking first time updating from Admin-Kit Policy (Time depends on Network connectivity)
